February 26, 2017

**ANSI/ASSE A1264.1-2017: Background Materials**

ASSE, as secretariat of the A1264 ANSI Accredited Standards Committee (ASC), coordinates the development of standards addressing safety requirements for workplace walking/working surfaces and their access.

ASSE has received many inquiries related to these standards, and due to these inquiries, we have put together a guide for those with interest.

Standard Title: ANSI/ASSE A1264.1-2017, *Safety Requirements for Workplace Walking/Working Surfaces and Their Access; Workplace Floor, Wall and Roof Openings; Stairs and Guardrails Systems*

SH&E professionals have used the A1264.1 standard since the 1960s in the form of the A12.1 and A64.1 standards. During the 1970s, these two standards were consolidated into one document, the A1264.1 standard. This standard(s) has history in excess of 50 years and is widely used/recognized in both the private and public sectors.

Past versions of ANSI A1264.1 include:

Standard Title: ANSI/ASSE A1264.1-2007, *Safety Requirements for Workplace Floor and Wall Openings, Stairs and Railing Systems*

Standard Title: ANSI/ASSE A1264.1-1995 (R2002), *Safety Requirements for Workplace Floor and Wall Openings, Stairs and Railing Systems*

Standard Title: ANSI/ASSE A1264.1-1995, *Safety Requirements for Workplace Floor and Wall Openings, Stairs and Railing Systems*

Standard Title: ANSI/ASSE A1264.1-1989, *Safety Requirements for Workplace Floor and Wall Openings, Stairs and Railing Systems*
Scope Purpose and Application of the Standard

1.1 Scope. This standard sets forth safety requirements in industrial and workplace situations for protecting persons in areas/places where danger exists of persons or objects falling from elevated walking and work surfaces such as floor, roof or wall openings, platforms, runways, ramps, fixed stairs or roofs in normal, temporary and emergency conditions.

E1.1 The scope of this document has application to more than industrial settings. It applies also to workplace settings used and occupied mainly by workers. For example, the document applies to stage areas in theaters as used by stage hands and performers (i.e., workers).

1.1.1 Excluded from this standard are: private residences; escalators; moving walks; floor openings occupied by elevators, manlifts, dumbwaiters, conveyors, machinery, containers; the loading and unloading areas of truck, railroad and marine docks; self-propelled motorized mobile equipment; mobile ladder stands and mobile work platforms; scaffolds used in the construction, alteration, demolition and maintenance of buildings and structures; ladders and construction work areas; and marina and floating tank ladders.

E1.1.1 Recognizing that the special safety requirements necessary for assembly occupancies may not be adequately covered by other codes or standards, this standard may provide the minimum safety performance requirements to protect the occupants. See ANSI/ASSE A10.18, Safety Requirements for Temporary Floors, Holes, Wall Openings, Stairways and Other Unprotected Edges in Construction and Demolition Operations.

1.2 Purpose. The purpose of this standard is to establish minimum safety requirements for working and walking areas to provide reasonable safety of persons pursuing their foreseeable duties.

1.3 Application.

1.3.1 The requirements of this standard apply to new and existing installations and workplace exposures to fall hazards.

E1.3.1 The requirements of this standard can be effectively applied during alterations of existing facilities or when major changes are made to work areas.

1.3.2 Construction and installation of all walking and work surfaces, guardrail systems and all other protective measures shall be of materials and methods suitable for the environment of intended use.
1.3.3 Falls which may cause injury can occur from any height. Employers shall complete a fall hazard assessment of all walking and work surfaces in order to determine the guarding necessary to prevent falls and injury. The requirements of this standard are minimum requirements and may not be sufficient for every installation. See ANSI/ASSE Z359.2, Minimum Requirements for a Comprehensive Managed Fall Protection Program, for a fall protection hierarchy or preferred order of control to eliminate or control fall hazards when designing fall protection solutions for both existing and new facilities.

1.3.4 Hazardous Location. Regardless of height, walking and work surfaces above or adjacent to dangerous equipment, open tanks and similar hazards, shall be protected in accordance with applicable standards to prevent falls into the hazard. See ANSI/ASSE Z359.2, Minimum Requirements for a Comprehensive Managed Fall Protection Program.

E1.3.4 For more information about fall protection please review ANSI/ASSE Z359.1, Safety Requirements for Personal Fall Arrest Systems, Subsystems and Components.

1.3.5 Order of Precedence. Applicable legal requirements (laws and governmental codes and regulations) supersede the requirements of this standard and shall be obeyed. Employers shall determine the applicable jurisdictional authorities and if application of this standard violates applicable legal requirements, then the violating requirements of this standard shall be waived.
