

CTC's Connie Muncy Chosen as One of Dayton Daily News' 2012 Top Ten Women

Outstanding Professional, Community, and Personal Achievements Have Influenced Lives in Dayton Area

CTC's Connie Muncy, Industrial Hygienist III, has been selected for the 50th Annual Dayton Daily News Top Ten Women Award. This award recognizes ten Dayton-area women for their outstanding professional, community, or personal achievements.

After wading through the many nominations, the Dayton Daily News announced the winners September 16, 2012, at the Dayton Women's Fair. A special Awards Luncheon will be held in December 2012 to further celebrate the awardees.

Connie could not be more thrilled about the honor; "I am so very excited to have been selected for the 50th Annual Dayton Daily News Top Ten Women Award, particularly since the event will be celebrating its 50th anniversary and since I have such a great passion for mentoring up and coming women."

Connie's name was submitted for this honor by Warren Brown, American Society of Safety Engineers (ASSE) Fellow. He described, in detail, Connie's many accomplishments (eight pages worth!). He described Connie as "an exceptional role model for young professional women...successfully dedicating herself to protecting people, property, and the environment since 1990 while fully embracing ethics and technical excellence."

Connie chose to join CTC primarily because of her appreciation of CTC's excellent reputation (World's Most Ethical Companies, Employer Support of the Guard and Reserve awards, Best Places to Work in Pennsylvania, *Washington Technology's* Top 100 U.S. Government Contractor). "I wanted to engage in a challenging opportunity to apply my technical expertise and experience to benefit our military men and women and the workers who support our troops, and to help mentor young up-and-coming professionals in the Industrial Hygiene and Safety career fields."

Connie holds a B.S. in Chemistry from Wright State University and an M.S. in Environmental Management from the University of Findlay. In addition, she has also pursued technical excellence through numerous certifications and coursework, such as: Certified Industrial Hygienist, Diplomat, The American Board of Industrial Hygienists; Occupational Safety and Health Administration Authorized Outreach General Industry Trainer; Registered Environmental Manager (REM), National Registry of Environmental Professionals; Occupational Safety and Health Administration Hazardous Waste Operator Technician and Site Supervisor Certificates; American Red Cross Certified Lay Instructor; and Authorized Incident Command System Trainer.

Connie has gone above and beyond in her professional and person lives, and this is not the first time she has been recognized for her work. The following is a list of other significant awards and honors she has received:

- Recipient, Affiliate Societies Council of Dayton's Outstanding Engineers and Scientists Award 2012 for Technical Leadership
- Honoree, "American Society of Safety Engineers 100 Women in Safety Engineering Making a Difference", 2011; Ms. Muncy is included in the book 100 Women Making a Difference in Safety, Health & Environmental Profession, pp. 63-65, American Society of Safety Engineers, Chicago, IL, 2011.
- Recipient, American Society of Safety Engineers Chapter of the Year Award, 2012
- Two Proclamations of Honor, Montgomery County Commissioners, 2009 and 2011
- Certificate for Outstanding Attainment from the General Assembly of the State of Ohio / Ohio Senate, 2012
- American Society of Safety Engineers Kitty Hawk Chapter Safety Professional of the Year, 2011
- Recipient, Dayton Chamber of Commerce Volunteer of the Quarter Award, 2010
- Recipient, Montgomery County Water Services Support Services Employee of the Year Award, 2005

Connie has excelled in male-dominated occupations including when she served as a commercial pilot and Federal Aviation Regulations Part 135 pilot flying DC-3s, Beech 18s and Twin Otters, receiving not a single Federal Aviation Administration violation, and serving as an exemplary model of aviation safety, having received much of her initial training at the Wright Patt Aero Club, Wright Patterson Air Force Base, Ohio. She also served as an Airframe and Power Plant Mechanic and became a Certified Flight Instructor.

She has also excelled in the Environmental, Health and Safety and Industrial Hygiene professions, serving as a mentor and example to young women in the Dayton area. She works hard to see that other professional women excel through activities such as contributions to the American Society of Safety Engineers Women in Safety Engineering common interest group, giving Girls in Science talks, and mentoring other women. She ultimately takes comfort in knowing that through her many efforts, somewhere in the United States a worker that might have otherwise been injured or killed in the workplace will go home tonight as a whole person to their family and friends.
